

AVIATION ACCIDENT ANALYSIS

INTRODUCTION

Our dataset is from kaggle.

It contains information from 1962 and later about civil aviation accidents in the US and its territories.

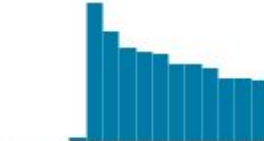

It has 31 features and about 88,000 rows

OBJECTIVES

My goal for this dataset is to determine :

- *which aircrafts have the lowest risk.
- *how accident rates have changed over time.
- *compare the accident rates on different aircraft manufacturers and models.
- *see how the data in this dataset correlate

Understanding the data

△ Event.Id  Event ID	△ Investigation.Type  Investigation Type	△ Accident.Number  NTSB Number	📅 Event.Date  Date of Event	△ Location  Event Location	△ Country  Country
87951 unique values	Accident 96% Incident 4%	88863 unique values	 1948-10-24 2022-12-29	27759 unique values	United States Brazil Other (6267)
20001218X45444	Accident	SEA87LA080	1948-10-24	MOOSE CREEK, ID	United States
20001218X45447	Accident	LAX94LA336	1962-07-19	BRIDGEPORT, CA	United States
20061025X01555	Accident	NYC07LA005	1974-08-30	Saltville, VA	United States
20001218X45448	Accident	LAX96LA321	1977-06-19	EUREKA, CA	United States
20041105X01764	Accident	CHI79FA064	1979-08-02	Canton, OH	United States
20170710X52551	Accident	NYC79AA106	1979-09-17	BOSTON, MA	United States

DATA CLEANING

As you've seen our data was kinda messy, ie it has missing values, it is inconsistent etc so it was really important that we clean it

We clean data by:

- *filling missing values
- *removing duplicates
- *removing whitespaces
- *ensuring all the data has a consistent format

Feature Engineering

This is creating new features from existing columns or separating columns to get a new feature

The new features we made are

- *the year column

- *the region column

- *total_injuries column

Data Distribution

total_serious_injuries

total_minor_injuries

total_uninjured

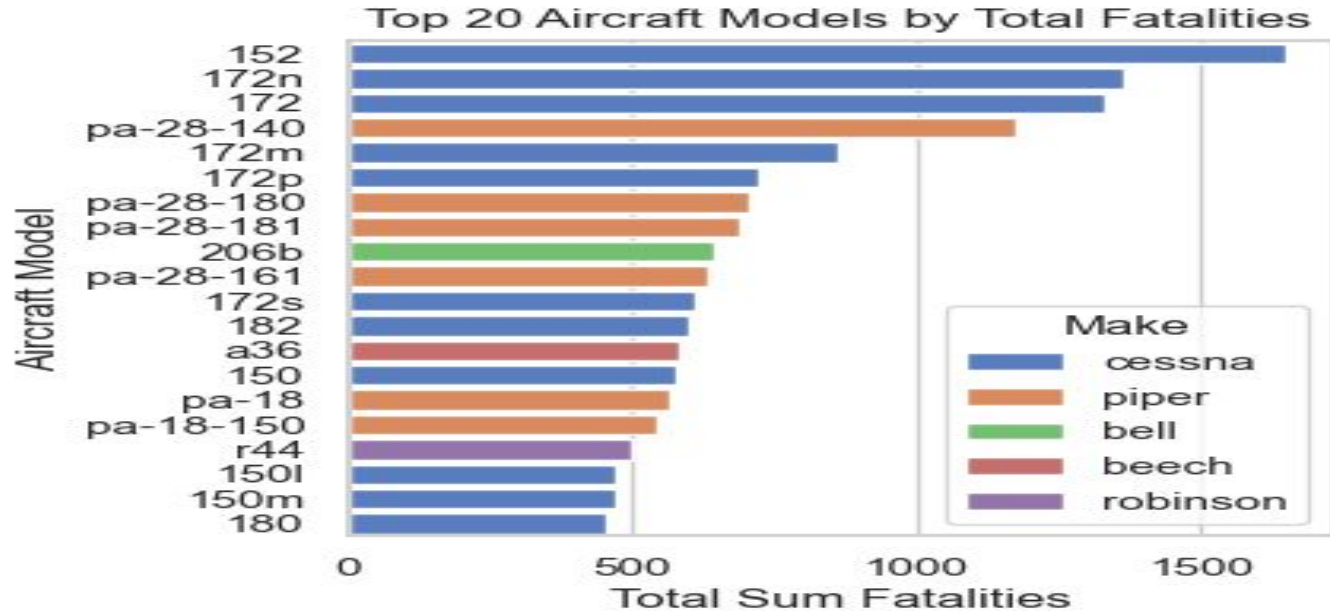

Outlier Detection

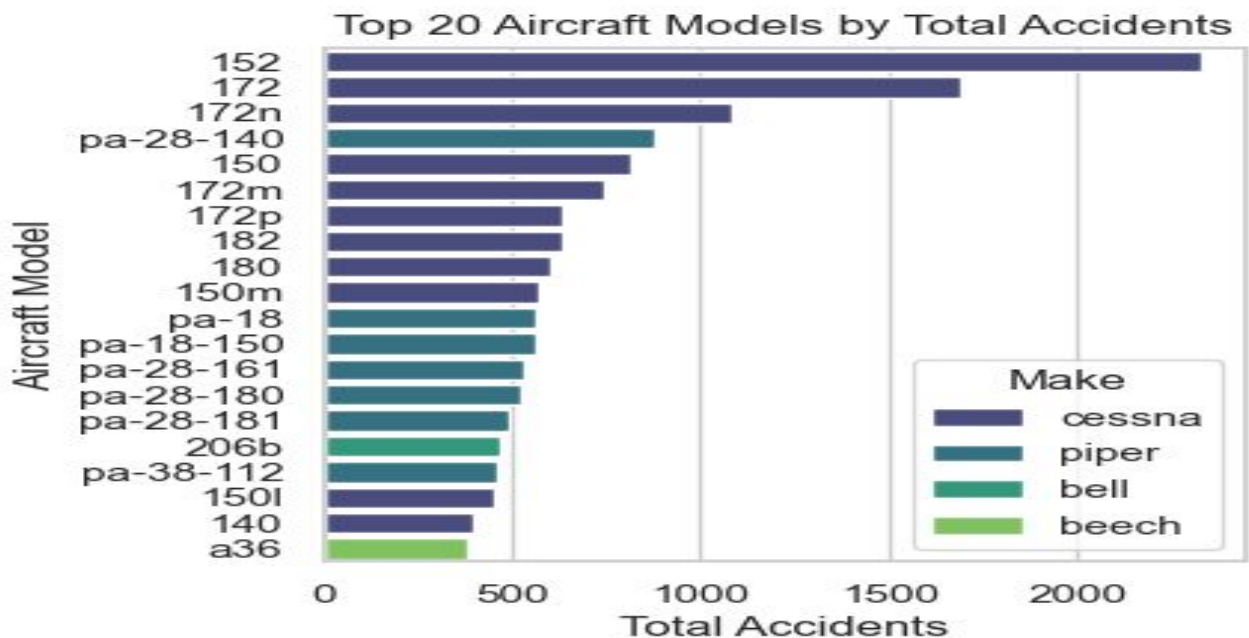

Accident over time analysis

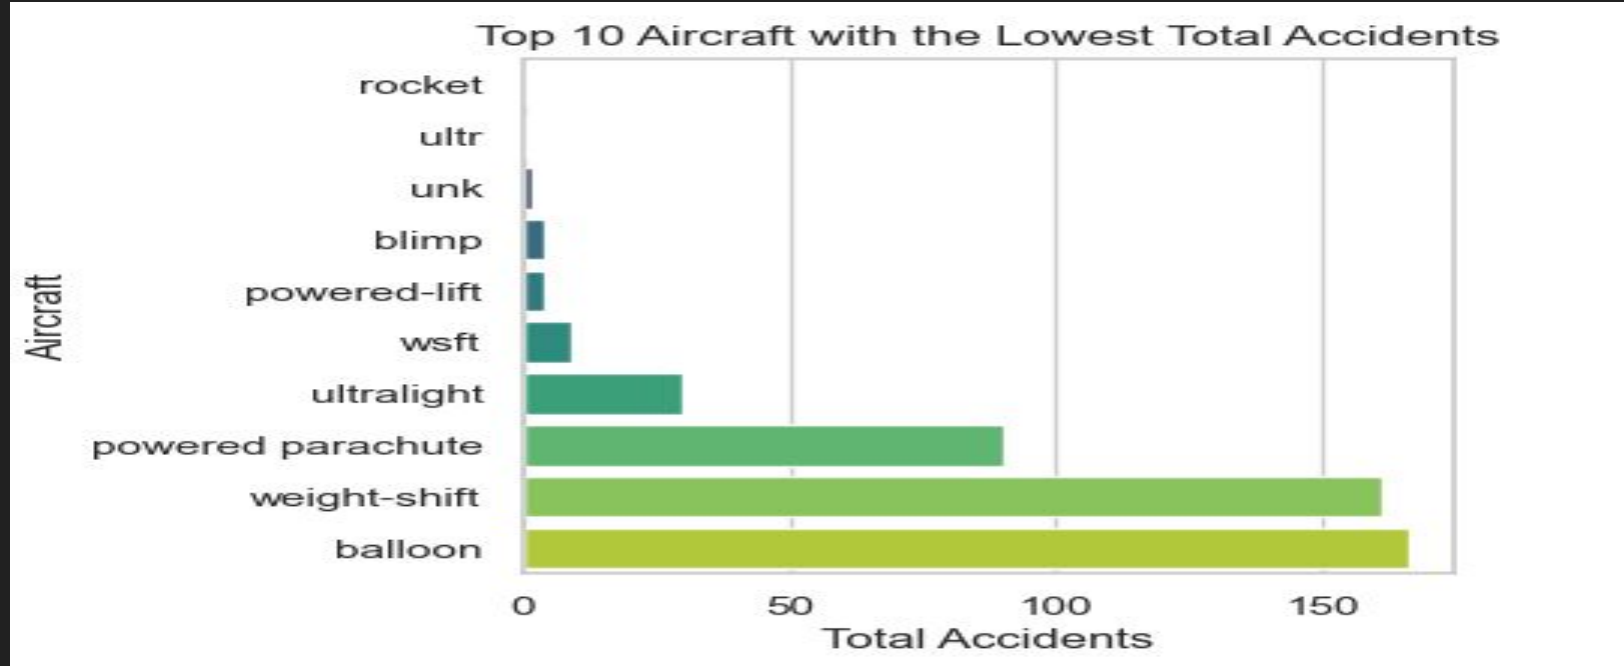

Accident rates on different makes and models

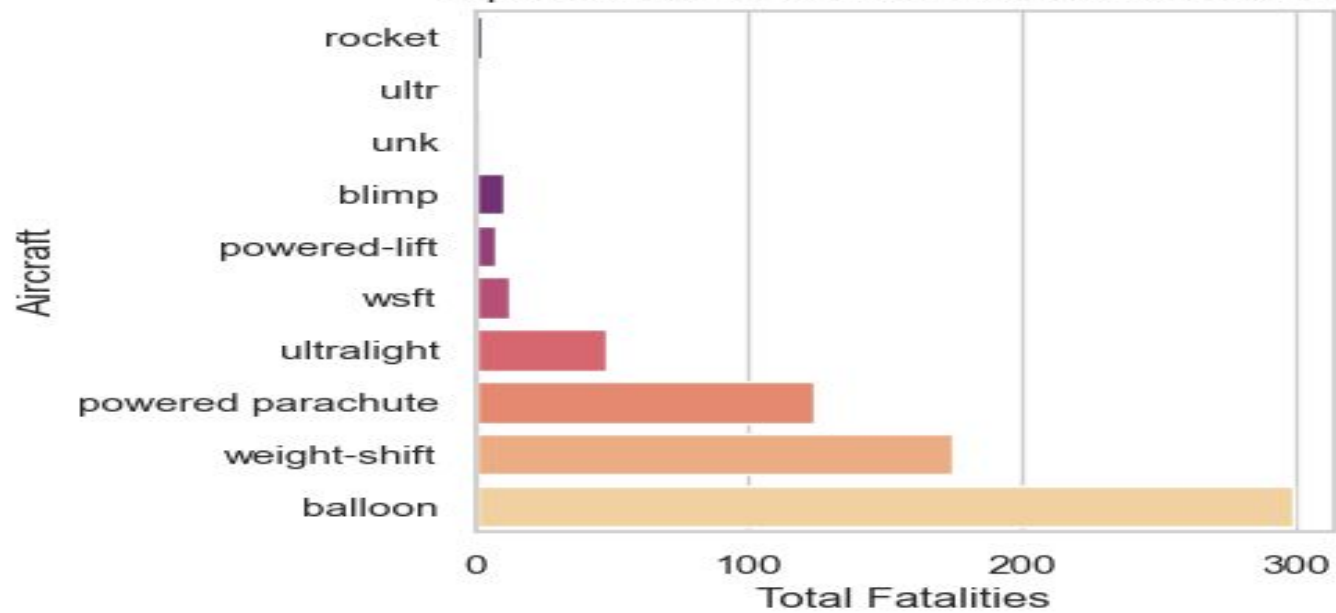

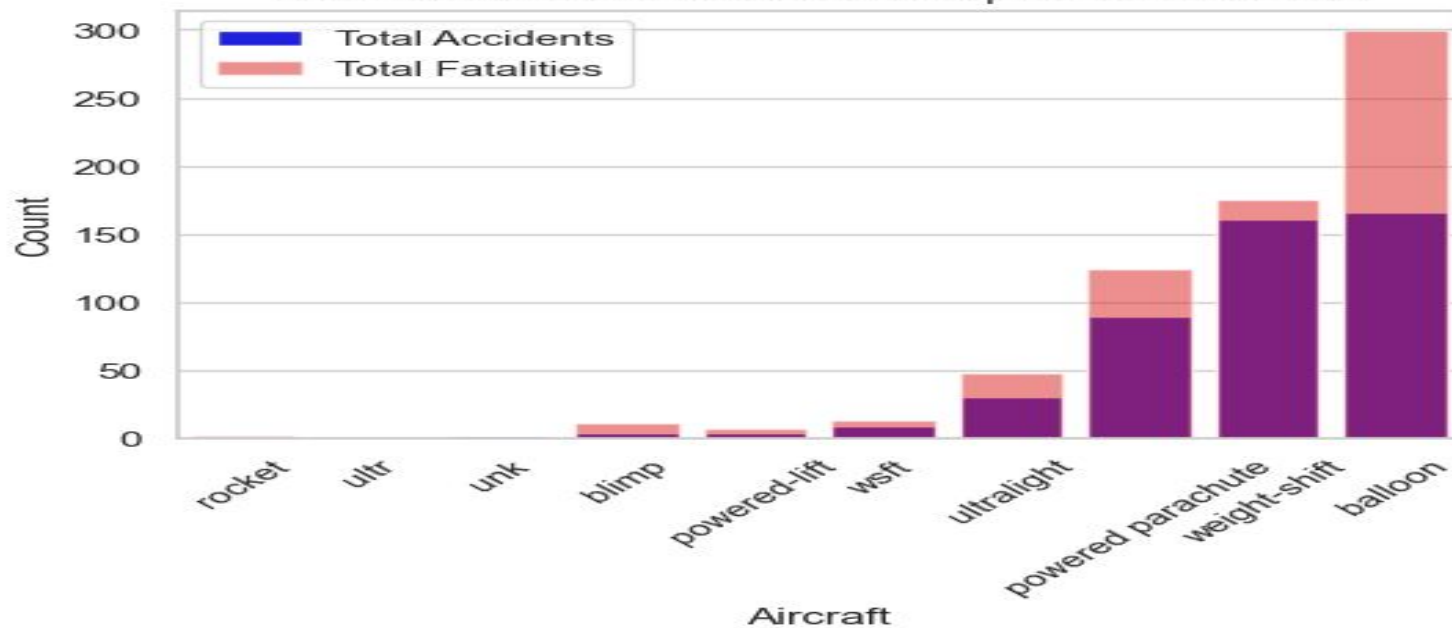

Risk assessment analysis

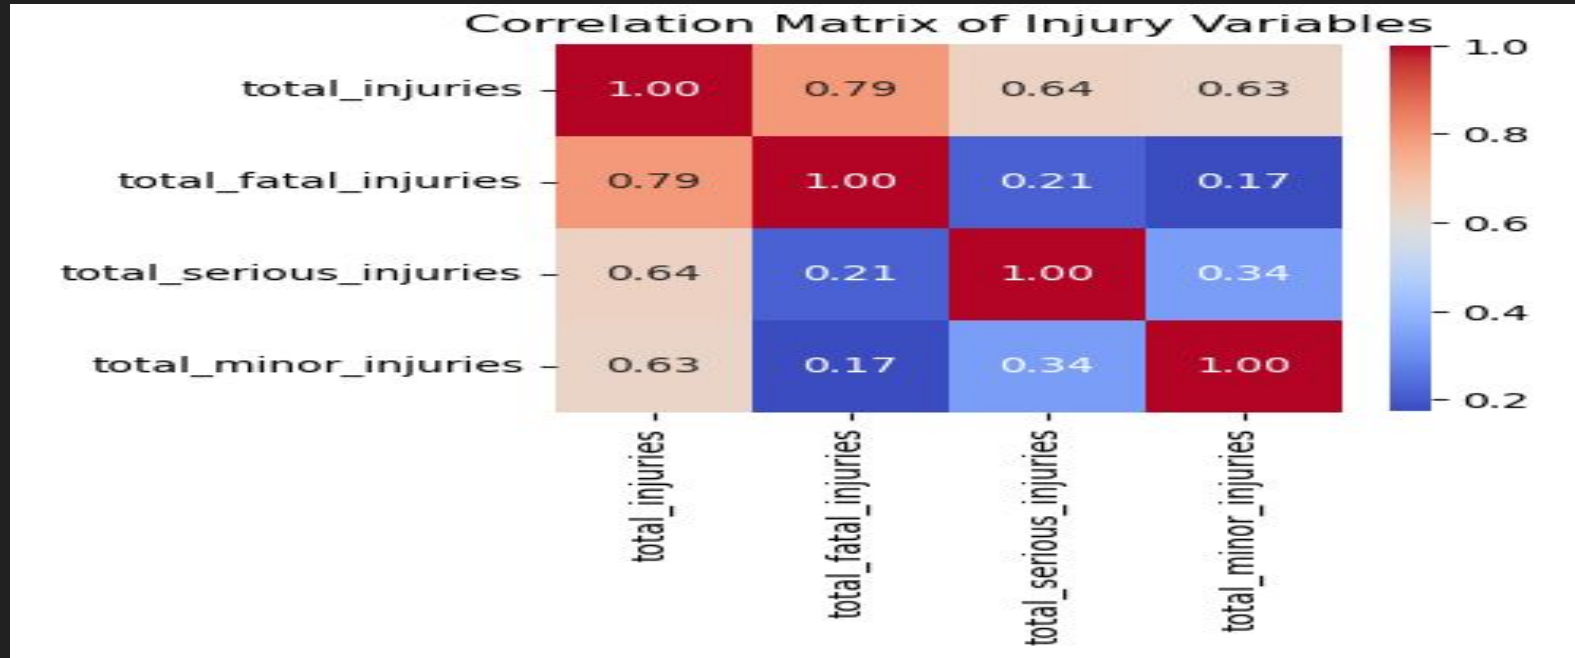

Top 10 Aircraft with the Lowest Total Fatalities

Total Accidents and Fatalities for Top 10 Safest Aircraft

Correlation analysis

Conclusions

From the analysis done:

- There was a large no of unknowns affecting the analysis
- There's high correlation between total_injuries and fatal injuries, minor injuries and lastly serious injuries
- Rate of accidents is decreasing over time
-

Recommendations

My recommendation are

- Find the unknown values then redo the analysis
- Continue following safety regulations to continue decreasing the accidents number
